Hey. That does include the volunteer data, and they used the EMAP reachwide sampling protocol. I'm a little confused about what you meant by the coordinates. . .I'm home sick now, but I can dig up the file I sent you and look at it.

Thanks! So, does that include the volunteer monitoring data? Are there any sampling methods by which I should not use the results? Some of the coordinates only go 2 places...is that right?
